Pig Trailers

The Armstrong & Holmes range of pig trailers has been designed both for operator convenience and to reduce stress levels in the animals during loading. The ability to hydraulically lower the trailer to ground level eliminates the need for ramps and so offers the pigs a more natural loading environment.

Robust steel box section construction for body and doors

Body and door seams are fully welded on the inside.

Lift assembly designed to take up minimum floor space

Mechanical locks on the lift assembly can be disengaged from the tractor seat to lower the trailer and lock automatically when the trailer is lifted.

Standard equipment includes split rear doors, stock-door on near side and centre dividing door

Optional Equipment:

Larger Tyres

Canopy

Side panels half panel/half vertical bars

Additional side gates, stock door or partitions inside trailer

Toolbox

Hurdles

Quality

Reliability

Value for Money
